

Dietary supplement

## ColbiotecPet Junior

- ✓ Immune support
- ✓ Correct growth and development
- ✓ Regulation of intestinal function

### SUPPORT IN EARLY LIFE

Powder formulation for dogs and cats. Intended for newborn animals as an addition to replacement milk and recommended for later life, at the so-called developmental age as an addition to food.

ColbiotecPet Junior is distinguished by its high content of standardised immunoglobulins. The product supports the development and function of the immune system of young animals and enhances their vitality. It compensates for possible deficiencies in macronutrients and trace elements. Provides additional protection for the intestines through the formation of an inflammatory flora against pathogens.

The aim of this comprehensive approach is to support the animal in its early life.

ACTIVE INGREDIENTS	MINERALS		PROBIOTICS
