ColbiotecVet

EXTRA

SUPPORT FOR HEALTHY
DEVELOPMENT

REGULATES INTESTINAL
FUNCTION AND REDUCES
CASES OF DIARRHEA

STRENGTHENS THE BODY,
IMPROVES VITALITY
AND ENSURES FASTER GROWTH

REDUCES THE USE
OF ANTIBIOTICS
AND TREATMENT COSTS

The product is intended for animals from 2 to 14 days of age

In rearing, early diarrhea and losses in the first two weeks of life due to various pathogens, pose a serious problem for many breeders. Only prophylaxis aimed at a broad spectrum can support the young.

ColbiotecVet Extra provides support to the body by stabilizing the intestinal flora. It provides a synergistic effect in stimulating natural immunity, especially during diarrhea and indigestion. Active yeast and probiotics are essential to remove pathogenic bacteria from the digestive tract and restore the natural microbiome. Colostrum, thanks to its growth factors, leads to improved development of the gastrointestinal tract and promotes regeneration of damaged cells of the intestinal mucosa.

Benefits: support of animals in early life, prevention of diarrhea and reduction of antibiotic therapy

Method of use: Serve daily from day 2 to 14 days of age with milk replacer or milk.

calves – 20 g/day

lambs, goats – 10 g/day

INGREDIENTS

Colostrum powder
of which - *Immunoglobulins*

Pectin

Saccharomyces cerevisiae

Lactobacillus acidophilus

Enterococcus faecium

Packaging: 1000 g
